Examiner's Amendment/Comment

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 15, 2006 has been entered.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Gregory A. Stobbs on March 14, 2007.

The application has been amended as follows:

- a. Amend claim **21** – “A light source apparatus for a range finder comprising a plurality of light sources arranged therein, being operable to project at least two kinds of desired light patterns according to control of a light emitting state of each of said plurality of light sources by a light source controller, wherein said plurality of light sources are arranged in an array on a flat surface with optical axes thereof disposed radially toward an object adapted for measuring a range, having linear groups aligned in parallel, and said optical axes of light sources in each said linear group are radially

disposed outward in a common plane, and intensity of the light sources increases or decreases monotonically in a linear group."

- b. Cancel claims **1-20, 22 and 25**.

Examiner's Statement of Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: the claim recites a range finder having a plurality of light sources arranged to project at least two kinds of desired light patterns according to the controller, the plurality of light sources are arranged in an array on a flat surface with optical axes thereof disposed radially toward an object measuring a range, linear groups aligned in parallel, and the linear groups are radially disposed outward in a common plane, where intensity of light sources increase or decreases monotonically.

Coté et al. (USPN 6,244,728) teaches the details of the linear group (e.g., Figure 4) arrangements of the plurality of light sources (e.g., 25; Figure 4) with its controller (e.g., columns 8-9, lines 45-25; 12). However, the arrangements are for aircraft formation light (e.g., column 9, lines 1- 50; "... light intensity under Federal Aviation Regulations ...") without two kinds of desired light patterns produced by its controller.

The prior art taken as a whole does not show nor suggest the range finding lighting apparatus with specified linear group(s) are radially disposed outward in a common plane, wherein the plurality of light sources are arranged in a flat surface with optical axes radially toward an object, nor is there any motivation to combine the details for the range finding lighting apparatus, the claims are deemed patentable over the prior art of record.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Y. Choi whose telephone number is (571) 272-2367. The examiner can normally be reached on Monday-Friday (10:00-7:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jong-Suk (James) Lee can be reached on (571) 272-7044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
